

COEN -241 Cloud Computing

HW1: System Vs OS Virtualization Report

Name: Saurabh Thalkari

SCU ID: 1648455

Github [link](#)

Host System Configuration:

- 1) Chip: Intel core i7 (11th gen)
- 2) CPU:
- 3) Memory:16GB
- 4) Free Disk space:19.4GB
- 5)Operating System: Windows 11

QEMU Installation and creation of QEMU image

Step 1: Download the ubuntu image using the link provided on Camino:

<https://releases.ubuntu.com>

And install the same on PC

Download QEMU using the following link (provided on Camino) :

<https://www.qemu.org/download/#windows>

After downloading, install it and add the path for QEMU in environment variables.

Step 2:

Open command prompt and go to the directory where you've installed QEMU.

C:\\Program Files\\qemu

Ubuntu image needs to be created. Use this command to do so:

qemu-img create -f qcow2 ubuntu.img 20G

Boot iso file on QEMU with the following command

qemu-system-x86_64 -hda ubuntu.img -boot d -cdrom

Following commands installs sysbench on QEMU

sudo apt-get update

sudo apt install sysbench

Welcome to Ubuntu 16.04.7 LTS (GNU/Linux 4.4.0-186-generic x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:    https://landscape.canonical.com
 * Support:       https://ubuntu.com/advantage

117 packages can be updated.
83 updates are security updates.

New release '18.04.6 LTS' available.
Run 'do-release-upgrade' to upgrade to it.

To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

saurabh@saurabh:~$ sudo apt-get update
[sudo] password for saurabh:

Commands: prepare run cleanup help version

See 'sysbench --test=<name> help' for a list of options for each test.

saurabh@saurabh:~$ sysbench -version
Unknown command: -version.
Usage:
  sysbench [general-options]... --test=<test-name> [test-options]... command

General options:
  --num-threads=N           number of threads to use [1]
  --max-requests=N          limit for total number of requests [10000]
  --max-time=N              limit for total execution time in seconds [0]
  --forced-shutdown=STRING  amount of time to wait after --max-time before forcing shutdown [off]
  --thread-stack-size=SIZE  size of stack per thread [32K]
  --init-rng=[on|off]       initialize random number generator [off]
  --test=STRING             test to run
  --debug=[on|off]          print more debugging info [off]
  --validate=[on|off]       perform validation checks where possible [off]
  --help=[on|off]           print help and exit
  --version=[on|off]        print version and exit

Compiled-in tests:
  fileio - File I/O test
  cpu - CPU performance test
  memory - Memory functions speed test
  threads - Threads subsystem performance test
  mutex - Mutex performance test
  oltp - OLTP test

Commands: prepare run cleanup help version

See 'sysbench --test=<name> help' for a list of options for each test.

saurabh@saurabh:~$ sysbench --version
sysbench 0.4.12
saurabh@saurabh:~$ _
```

Docker Setup:

```
root@929a930c24aa: /

C:\Users\tsaur>docker login
Login with your Docker ID to push and pull images from Docker Hub. If you don't have a Docker ID, head over to https://hub.docker.com to create one.
Username: tsaurabh21

C:\Users\tsaur>docker pull ubuntu:16.04
16.04: Pulling from library/ubuntu
Digest: sha256:1f1a2d56de1d604801a9671f301190704c25d604a416f59e03c04f5c6ffee0d6
Status: Image is up to date for ubuntu:16.04
docker.io/library/ubuntu:16.04

C:\Users\tsaur>docker run -it --name myubuntu -m 4g --cpus=2 ubuntu:16.04
root@929a930c24aa:/#
```

1. Initiate and launch a fresh container using the Ubuntu image:
 - docker container run Ubuntu
2. Access a bash shell within the Ubuntu container:
 - docker container run -it ubuntu bash

Test Configurations

To carry out the VM experiment, we will examine four test conditions outlined in the table below. To maintain consistency in the results, we will apply identical test conditions for both QEMU & Docker.

Memory	Cores
2Gb	2
4Gb	2
2GB	3
4GB	3

Proof of Experiment

This section focuses on test scenarios specifically associated with sysbench commands related to CPU, memory, and File I/O. Additionally, we will experiment with various QEMU VM configurations to determine if altering these configurations yields distinct results.

1. CPU Testing

Use following bash script to evaluate CPU performance.

```
#!/bin/bash

# First CPU Test Case: High Prime Number Calculation
echo "Running First CPU Test: High Prime Number Calculation"
for i in {1..5}
do
    echo "Iteration $i"
    sysbench --test=cpu --cpu-max-prime=20000 run
    echo ""
done

# Second CPU Test Case: Multiple Threads
echo "Running Second CPU Test: Multiple Threads"
for i in {1..5}
do
    echo "Iteration $i"
    sysbench --test=cpu --num-threads=4 --cpu-max-prime=10000 run
    echo ""
done

echo "All CPU tests are completed."
```

2. FILE I/O Testing

Use following bash script to evaluate File read/write.

```
#!/bin/bash

# First File I/O Test Case: Sequential Write
echo "Running First File I/O Test: Sequential Write"
for i in {1..5}
do
    echo "Iteration $i"
    sysbench --test=fileio --file-total-size=250M --file-test-mode=seqwr prepare
    sysbench --test=fileio --file-total-size=250M --file-test-mode=seqwr run
    sysbench --test=fileio --file-total-size=250M cleanup
    echo ""
done

# Second File I/O Test Case: Random Read
echo "Running Second File I/O Test: Random Read"
for i in {1..5}
do
    echo "Iteration $i"
    sysbench --test=fileio --file-total-size=300M --file-test-mode=rndrd prepare
    sysbench --test=fileio --file-total-size=300M --file-test-mode=rndrd run
    sysbench --test=fileio --file-total-size=300M cleanup
    echo ""
done

echo "All File I/O tests are completed."
```

3. Memory Testing

Use following bash script for memory testing.

```
#!/bin/bash
# First Memory Test Case: Sequential Memory Access
echo "Running First Memory Test: Sequential Access"
for i in {1..5}
do
    echo "Iteration $i"
    sysbench --test=memory --memory-block-size=1K --memory-total-size=100G --memory-
access-mode=seq run
    echo ""
done

# Second Memory Test Case: Random Memory Access
echo "Running Second Memory Test: Random Access"
for i in {1..5}
do
    echo "Iteration $i"
    sysbench --test=memory --memory-block-size=1K --memory-total-size=100G --memory-
access-mode=rnd run
    echo ""
done
echo "All Memory tests are completed."
```

Results

QEMU Screenshots and Observations:

1. Configuration 1: 2 GB RAM with 2 Cores

Qcow2 disk image

CPU Test for max-prime = 20000

```
Running the test with following options:
Number of threads: 1

Doing CPU performance benchmark

Threads started!
Done.

Maximum prime number checked in CPU test: 20000

Test execution summary:
total time: 35.5088s
total number of events: 10000
total time taken by event execution: 35.4315
per-request statistics:
  min: 2.50ms
  avg: 3.54ms
  max: 22.05ms
  approx. 95 percentile: 5.02ms

Threads fairness:
  events (avg/stddev): 10000.0000/0.00
  execution time (avg/stddev): 35.4315/0.00
```

Observations:

Iteration 1: 3.54ms

Iteration 2: 3.20ms

Iteration 3: 3.43ms

Iteration 4: 3.82ms

Iteration 5: 3.41ms

Avg. Time	Min. Time	Max. Time
3.48ms	0.97ms	43.12ms

CPU Test for max-prime = 10000

```
Maximum prime number checked in CPU test: 10000

Test execution summary:
  total time:                      1.9028s
  total number of events:          10000
  total time taken by event execution: 7.6065
  per-request statistics:
    min:                          0.46ms
    avg:                          0.76ms
    max:                          8.75ms
    approx. 95 percentile:        0.99ms

Threads fairness:
  events (avg/stddev):            2500.0000/54.67
  execution time (avg/stddev):    1.9016/0.00
```

Observations:

Iteration 1: 0.76ms

Iteration 2: 1.20ms

Iteration 3: 0.93ms

Iteration 4: 0.82ms

Iteration 5: 0.91ms

Avg. Time	Min. Time	Max. Time
0.98ms	0.38ms	13.42ms

File I/O Test for Sequential Write:

```
Operations performed: 0 Read, 131072 Write, 128 Other = 131200 Total
Read 0b Written 2Gb Total transferred 2Gb (65.316Mb/sec)
4180.20 Requests/sec executed

Test execution summary:
  total time:                      31.3554s
  total number of events:          131072
  total time taken by event execution: 26.2282
  per-request statistics:
    min:                          0.09ms
    avg:                          0.20ms
    max:                          32.97ms
    approx. 95 percentile:        0.38ms
```

Observations:

Iteration 1: 0.20ms

Iteration 2: 0.32ms

Iteration 3: 0.23ms

Iteration 4: 0.11ms

Iteration 5: 0.32ms

Avg. Time	Min. Time	Max. Time
0.236ms	0.08ms	32.97ms

File I/O Test for Random Read:

```
Operations performed: 10000 Read, 0 Write, 0 Other = 10000 Total
Read 156.25Mb Written 0b Total transferred 156.25Mb (2.1026Gb/sec)
137793.69 Requests/sec executed

Test execution summary:
total time:                      0.0726s
total number of events:          10000
total time taken by event execution: 0.0706
per-request statistics:
  min:                          0.00ms
  avg:                          0.01ms
  max:                          10.32ms
  approx. 95 percentile:        0.01ms
```

Observations:

Iteration 1: 0.01ms

Iteration 2: 0.02ms

Iteration 3: 0.01ms

Iteration 4: 0.03ms

Iteration 5: 0.01ms

Avg. Time	Min. Time	Max. Time
0.1ms	0.00ms	19.82ms

Memory Test for Sequential Memory Access:

```
Doing memory operations speed test
Memory block size: 1K

Memory transfer size: 250M

Memory operations type: write
Memory scope type: global
Threads started!
Done.

Operations performed: 256000 (88102.96 ops/sec)
250.00 MB transferred (86.04 MB/sec)

Test execution summary:
total time: 2.9057s
total number of events: 256000
total time taken by event execution: 2.2192
per-request statistics:
    min: 0.01ms
    avg: 0.01ms
    max: 16.01ms
    approx. 95 percentile: 0.00ms

Threads fairness:
events (avg/stddev): 256000.0000/0.00
execution time (avg/stddev): 2.2192/0.00

Memory tests completed
```

Observations:

Iteration 1: 0.01ms

Iteration 2: 0.23ms

Iteration 3: 0.21ms

Iteration 4: 0.08ms

Iteration 5: 0.02ms

Avg. Time	Min. Time	Max. Time
0.11ms	0.01ms	53.89ms

Memory Test for Random Memory Access:

```
Operations performed: 256000 (3336145.43 ops/sec)

250.00 MB transferred (3257.95 MB/sec)

Test execution summary:
  total time:                                0.0767s
  total number of events:                    256000
  total time taken by event execution: 0.0607

Memory Test for Random Memory Access

```
Machine View
Running Second Memory Test: Random Access
Iteration 1
sysbench 0.4.12: multi-threaded system evaluation benchmark

Running the test with following options:
Number of threads: 1

Doing memory operations speed test
Memory block size: 1K

Memory transfer size: 250M

Memory operations type: write
Memory scope type: global
Threads started!
Done.

Operations performed: 256000 (71946.15 ops/sec)
250.00 MB transferred (70.26 MB/sec)

Test execution summary:
total time: 3.5582s
total number of events: 256000
total time taken by event execution: 2.6996
per-request statistics:
  min: 0.01ms
  avg: 0.01ms
  max: 16.11ms
  approx. 95 percentile: 0.00ms

Threads fairness:
  events (avg/stddev): 256000.0000/0.00
  execution time (avg/stddev): 2.6996/0.00
```

Observations:

Iteration 1: 0.01ms

Iteration 2: 0.00ms

Iteration 3: 0.01ms

Iteration 4: 0.00ms

Iteration 5: 0.00ms

0.01ms	0.0ms	67.39ms

Docker

CPU Test for max-prime 20000

```
root@af2ce3a7ea8b:/# chmod +x cpu_bash_script.sh
root@af2ce3a7ea8b:/# ./cpu_bash_script.sh
Running First CPU Test: High Prime Number Calculation
Iteration 1
sysbench 0.4.12: multi-threaded system evaluation benchmark

Running the test with following options:
Number of threads: 1

Doing CPU performance benchmark

Threads started!
Done.

Maximum prime number checked in CPU test: 20000

Test execution summary:
total time: 13.2565s
total number of events: 10000
total time taken by event execution: 13.2537
per-request statistics:
  min: 1.16ms
  avg: 1.33ms
  max: 11.71ms
  approx. 95 percentile: 1.72ms

Threads fairness:
events (avg/stddev): 10000.0000/0.00
execution time (avg/stddev): 13.2537/0.00
```

Observations:

Average time for each iteration:

Iteration 1- 1.29

Iteration 2- 1.36

Iteration 3- 1.39

Iteration 4- 1.34

Iteration 5- 1.32

Avg. Time	Min. Time	Max. Time
1.34ms	0.98ms	35.32ms

CPU Test for max-prime=10000

```
Running the test with following options:
Number of threads: 4

Doing CPU performance benchmark

Threads started!
Done.

Maximum prime number checked in CPU test: 10000

Test execution summary:
total time: 1.8393s
total number of events: 10000
total time taken by event execution: 7.3471
per-request statistics:
  min: 0.46ms
  avg: 0.73ms
  max: 4.57ms
  approx. 95 percentile: 0.98ms
```

Observations:

Average time for each iteration:

Iteration 1- 0.73

Iteration 2- 0.70

Iteration 3- 79

Iteration 4- 0.71

Iteration 5- 0.68

Avg. Time	Min. Time	Max. Time
1.34ms	0.40ms	6.57ms

File I/O Test for Sequential Write

```
Running the test with following options:
Number of threads: 1

Extra file open flags: 0
128 files, 1.9531Mb each
250Mb total file size
Block size 16Kb
Periodic FSYNC enabled, calling fsync() each 100 requests.
Calling fsync() at the end of test, Enabled.
Using synchronous I/O mode
Doing sequential write (creation) test
Threads started!
Done.

Operations performed:  0 Read, 16000 Write, 128 Other = 16128 Total
Read 0b Written 250Mb Total transferred 250Mb (418.99Mb/sec)
26815.27 Requests/sec executed

Test execution summary:

Analysis

The detailed observations from all the tests performed indicates that Docker consistently surpasses QEMU in performance across a range of benchmarks including CPU performance, memory efficiency, and disk I/O operations. This comprehensive performance evaluation showcases Docker's architectural advantages, which enable it to leverage the host system's resources more directly and efficiently compared to QEMU's full hardware emulation approach.

In CPU benchmarks, Docker exhibits superior efficiency with notably lower execution times, reflecting its optimized processing capabilities. Memory performance tests further illustrate Docker's ability to manage and utilize system memory more effectively, with faster access times and reduced latency. For disk I/O operations, Docker demonstrates enhanced throughput and lower latency in both sequential and random read/write tasks, underscoring its advanced disk management techniques.

These findings are attributed to Docker's lightweight containerization model, which avoids the overhead associated with traditional virtualization methods used by QEMU. By operating at the OS level and sharing the host kernel, Docker provides a more streamlined execution environment. This results in improved resource allocation, lower overheads, and ultimately, better performance across the board.

Conclusion

The comprehensive conclusion from the document's analysis of Docker and QEMU performance metrics across various configurations and tests for CPU, memory, and File I/O operations demonstrates Docker's significant efficiency and performance advantage over QEMU. Docker's containerization approach, which allows direct utilization of the host system's resources, leads to markedly better performance outcomes in terms of execution times and resource utilization. This efficiency is evident across all tested parameters, highlighting Docker's suitability for high-performance applications where resource optimization is crucial. Conversely, while QEMU's full-system emulation offers broader compatibility and isolation, it does so at the cost of higher resource consumption and reduced performance efficiency. This analysis provides a clear demonstration of Docker's advantages in environments where performance and efficiency are paramount, positioning it as the preferred solution for deploying applications that demand rapid response times and efficient resource use.
